Citation. Texas Education Agency. (2003.) *College admissions testing of graduating seniors in Texas high schools, 2000-01* (Document No. GE03 601 03). Austin, TX: Author.

Abstract. Texas SAT[®] I and ACT participation and performance in 2000-01 were examined. The highest number of Texas public school graduates ever—122,417 or 62.9 percent—took either the SAT I or ACT in 2000-01, up slightly from 62.2 percent in 1999-00. Less than one-third (26.9%) of all examinees achieved the AEIS criterion score on either test in 2000-01, down from 27.3 percent in 1999-00. Asian American graduates had the highest participation rate at 85.2 percent, followed by Native American (76.9%) and White graduates (70.0%). Hispanics had the lowest rate, with 46.5 percent of graduates participating in SAT I or ACT testing. A larger proportion of Asian American examinees (42.8%) met the criterion score than did any other group, while African Americans had the smallest proportion of examinees (7.4%) who met the criterion score. The percentages of White and African American SAT I and ACT examinees in public and non-public schools combined were generally similar in Texas and the nation from 1996 through 2001. During this same time period, the percentages of Texas Hispanic examinees were about three to four times larger than the percentages of Hispanic test takers nationally. Mean scores for Texas and the nation remained relatively stable.

Highlights

Texas Public Schools

Texas and the United States

Texas Public Schools

Academic Excellence Indicator System Measures

Participation

- In 2000-01, a total of 122,417 Texas public high school graduates took either the SAT I or ACT. This was up from 120,077 graduates in 1999-00. The number of examinees in 2000-01 reflects an overall participation rate of 62.9 percent.
- Asian/Pacific Islanders had the highest participation rate at 85.2 percent, and Hispanics had the lowest participation rate at 46.5 percent.

Performance

- In 2000-01, only 26.9 percent of all examinees achieved the criterion score on either the SAT I or ACT. In 1999-00, 27.3 percent of examinees met the criterion.
- A larger proportion of Asian/Pacific Islander examinees met the criterion scores (42.8%) than did any other group. African Americans had the smallest proportion of examinees who met the criterion scores (7.4%).

SAT I

Participation

- In the 2000-01 school year, 98,336 public high school graduates took the SAT I examination. This represents a slight increase in participation rate (50.6%) from the previous year (50.0% in 1999-00).
- The participation rates in SAT I testing by ethnicity were 77.6 percent of Asian/Pacific Islander graduates, 48.5 percent of White graduates, 44.0 percent of African American graduates, and 32.7 percent of Hispanic graduates.

Performance

- The average SAT I Total score in 2000-01 was 987, down from 990 in 1999-00.
- In 2000-01, Asian/Pacific Islander examinees obtained the highest average SAT I score at 1069, and African American examinees obtained the lowest average SAT I score at 846.

ACT

Participation

- In the 2000-01 school year, 60,536 public high school graduates took the ACT examination. This represents a participation rate of 31.1 percent, up from 30.8 percent in 1999-00.
- The participation rates in ACT testing by ethnicity were 33.1 percent of White graduates, 28.6 percent of African American graduates, 27.4 percent of Asian/Pacific Islander graduates, and 20.4 percent of Hispanic graduates.

Performance

- The average ACT Composite score in 2000-01 was 20.2, down one-tenth of a point from 20.3 in 1999-00.
- In 2000-01, Asian/Pacific Islander examinees obtained the highest average ACT Composite score at 22.1, and African American examinees obtained the lowest average ACT score at 17.1. Asian/Pacific Islander examinees scored considerably higher on the Mathematics section than did the other ethnic groups; their average score of 23.8 was almost three points higher than the next highest average Mathematics score of 21.4, obtained by White examinees.

Texas and the United States

SAT I

- In 2000-01, a total of 111,277 Texas public and non-public high school graduates took the SAT I, resulting in a participation rate of approximately 53 percent, up from 52 percent in 1999-00. Nationally 1,276,320 public and non-public high school graduates took the SAT I, resulting in a participation rate of about 45 percent, up from 44 percent in 1999-00.
- The percentages of White examinees and African American examinees were comparable in Texas and in the nation. However, whereas Hispanics made up 20.5 percent of the test-taking population in Texas, nationally the average percentage of Hispanic test takers was only 7.9 percent.
- In 2000-01, the mean SAT I Total score in Texas was 992, down from 993 in 1999-00. In 2000-01, the mean SAT I Total score nationally was 1020, up from 1019 in 1999-00. Subject scores were generally higher nationally than in Texas; however, the mean Verbal score of Asian/Pacific Islander examinees was higher in Texas than nationally.

ACT

- In 2000-01, a total of 68,967 Texas public and non-public high school graduates took the ACT, for a participation rate of approximately 33 percent, up from 32 percent in 1999-00. Nationally 1,069,772 public and non-public high school graduates took the ACT, for a participation rate of about 38 percent, the same as in 1999-00.
- The percentages of African American examinees were comparable in Texas and the nation. However, the percentage of Hispanic test takers in Texas was about four times larger than the percentage of Hispanic test takers nationally. The percentage of White examinees in Texas was close to 17 percentage points smaller than the percentage of White examinees nationally.

Overview

This report provides results for 2000-01 graduating seniors from the SAT I: Reasoning Test, published by the College Board, and from the ACT Assessment, published by ACT, Inc. The first section provides (1) general information on the SAT I and ACT examinations, (2) a discussion of the importance of participation rate in the interpretation of test scores and as a high school performance indicator, (3) information on the use and interpretation of SAT I and ACT scores, and (4) specific uses of college admissions test scores in Texas. After an explanation of the data sources in the second section, the third section provides SAT I and ACT results for the graduates of Texas public schools in 2000-01. Participation rates and performance on the examinations are provided for all examinees and by ethnicity and gender. In addition, trends in participation and performance are examined for the time period 1995-96 through 2000-01. The fourth section provides a comparison of SAT I and ACT performance for all graduates in public and non-public schools in Texas and in the nation as a whole. The fifth section provides SAT I and ACT scores for all 50 states, along with the percentage of graduates who took the tests in each state. In the appendices can be found the SAT I and ACT results for each district and public school in Texas in which at least five graduates were tested.

College Admissions Testing: The SAT I and ACT

General Information

Access to Testing

Use and Interpretation of SAT I and ACT Scores

Use of College Entrance Examination Scores in Texas

General Information

The SAT I and ACT are national college admissions examinations designed to assess the readiness of high school students for college-level work. Some studies have shown that high scorers on these examinations are likely to perform well in college, as indicated by significant correlations between scores on college admissions tests and college grades (e.g., Camara & Echternacht, 2000). Unlike many state assessments, the SAT I and ACT examinations are voluntary. Depending on their future college plans, students may take either, both, or neither of the examinations. Both the SAT I and the ACT assess a broad range of academic skills and are not directly tied to any specific curriculum.

The SAT I examination consists of two sections on which examinees receive scores: Verbal and Mathematics. In addition, a Total score is assigned as the sum of the scores on the two sections. The Verbal and Mathematics scores range from 200 to 800, and the Total score ranges from 400 to 1600. College Board publications provide additional information about the SAT I (College Board, 2001a, 2001b). Beginning in March of 2005, a revised SAT I examination will be implemented: the Critical Reading section, currently known as the Verbal section, will become more of a reading assessment and will no longer contain analogy items; the Mathematics section will be expanded to include items from Algebra II and will no longer include quantitative comparison items; and a Writing section will be added to include multiple choice questions on the use of standard English and a written essay.

The ACT examination consists of four sections on which examinees receive scores: English, Mathematics, Reading, and Science Reasoning. In addition, a Composite score is assigned as the average of the scores on these four sections. All scores range from 1 to 36. ACT, Inc. publications provide additional information about this examination (ACT, Inc., 2002). Beginning in the spring of 2005, an optional writing sample will be added to the ACT.

Access to Testing

Participation in SAT I or ACT testing is influenced by many factors. Not participating in testing is sometimes a voluntary decision on the part of examinees, influenced by factors such as the decision not to attend college and inadequate preparation for the examinations. In other cases, factors such as financial hardship and disability may influence the decision whether to participate in testing. The state and testing companies have implemented policies to help remove these barriers to testing. The College Board website at www.collegeboard.com and the ACT website at www.act.org have additional information on fees, fee waivers, and special services for examinees.

Fees and fee waivers

For junior and senior high school students who may be affected by financial constraints, test fee waivers from the College Board and from ACT, Inc. are available based on economic need. Eligibility criteria include: (1) family income; (2) whether the family receives public assistance; (3) whether the student lives in a foster home; and (4) whether the student participates in a program

for the economically disadvantaged, such as Upward Bound. A student may receive a maximum of two fee waivers for the SAT I. A student may receive only one fee waiver for the ACT. In many Texas schools and districts, local criteria and availability of local funding determine the extent to which testing fees for students who do not meet the above criteria may also be waived.

Services for students with disabilities

Both the College Board and ACT, Inc. provide special services for students with disabilities. To qualify, a student must have a documented need for testing accommodations. In most cases, a student must also be receiving special accommodations for classroom tests. Texas State Board of Education rules relating to testing accommodations for classroom tests are specified in 19 Texas Administrative Code [TAC] §101.3 (1999). Beginning in fall 2003, both ACT Inc. and the College Board will no longer identify the test scores of a student who takes the tests under special circumstances because of a documented disability.

Use and Interpretation of SAT I and ACT Scores

Individual Scores

For individual students, college admissions tests are measures of readiness for first-year college-level academic work. Unlike achievement tests, which assess mastery of specific subjects, the SAT I and ACT focus on measuring general verbal and mathematical skills not directly tied to specific courses or high school curricula (Atkinson, 2001). An individual student's performance on the SAT I and ACT is reported as a scale score. For each scale score there is a corresponding percentile rank, which is the percentage of test takers who score below that particular scale score. For example, if a test taker scores at the 90th percentile, 90 percent of the other test takers received scale scores lower than this individual's score. Although the difficulty of test items and tests may change from test form to test form or from year to year, statistical equating ensures that any given score has the same meaning in terms of student ability level across test forms or testing dates (College Board, 2001b). Percentile ranks provide information on examinees' standing relative to other examinees and thus enable high scorers to be discriminated from low scorers.

SAT I or ACT scores are used by a majority of colleges and universities as part of college admissions selection processes. As norm-referenced tests, the SAT I and ACT can be used to predict who is likely to succeed in college study, although, according to the *Standards for Educational and Psychological Testing* (American Educational Research Association, American Psychological Association, and National Council on Measurement in Education, 1999), "any decision about a student should not be based on the results of a single test, but should include other relevant and valid information." Most institutions of higher education do, in fact, include other relevant and valid information in making admission decisions, including high school grade point average, courses taken, and participation in extracurricular activities. The manner in which all the relevant information is combined as part of the selection decision is unique to each institution. Colleges and universities have

developed their own equations for evaluating information and determining whether students meet final criteria for admission. As a result, admission standards associated with SAT I and ACT scores differ from institution to institution. In addition to their use as admissions tools by colleges and universities, college admissions tests are also used in awarding scholarships to students and may be used for freshman course placement.

Group Scores

Because both the SAT I and ACT are voluntary, only a self-selected portion of the graduate population takes either test each year. Participation rate becomes important in interpreting examination scores when only a subset of a population takes the examination. The average score of a population is dependent on the percentage of its members who actually take the test, which, in turn, affects the kinds of comparisons that can be made. For example, if only 10 percent of high school graduates take the SAT I, their mean SAT I score is not likely to be an accurate estimate of the mean SAT I score that would be obtained if the entire graduate population took the test. On the other hand, if 90 percent of high school graduates take the SAT I, their mean SAT I score is likely to be rather close to the mean SAT I score of the whole graduate population.

In addition, the mean score of a population with a very low participation rate will usually be higher than the mean score of a population with a high participation rate, assuming the ability level of each population is actually the same. An illustration of this is provided in Figure 1, in which the 2000-01 SAT I participation rate for each state in the United States is plotted against its mean SAT I Mathematics score. As the participation rate decreases, the average score generally increases. In a population with a low participation rate, it is likely that only the most academically able, the most motivated, and the best prepared students take the test, resulting in an estimate of the population score that may be biased upward, or inflated. In a population with a moderate to high participation rate, a relatively unbiased estimate of the population score can be obtained. This directly affects the types of comparisons that can be made among states, districts, campuses, and various student groups. Generally, comparisons of average SAT I or ACT scores should be limited to groups with similar participation rates. Even so, the validity of score comparisons is less dependent on participation rate once the participation rate reaches a certain level. This is clear in Figure 1, where the relationship between participation and performance begins to stabilize between 50 and 60 percent participation.

Over time, changes in aggregate SAT I and ACT test scores indicate changes in student preparedness for college. When changes in group mean scores are compared over time, the statistical significance of a change in scores depends on the average size of the group of examinees. Smaller groups require a larger change in order for the change to be statistically significant; larger groups require a smaller change to attain the same level of statistical significance. Therefore, it is more appropriate to make comparisons of score changes within a single group than to make comparisons of score changes between groups of different sizes. For example, the increase from a mean Verbal SAT I score of 600 to a mean score of 700 does not have the same implications in a group with 100 examinees as it does in a group with 10,000 examinees.

Figure 1
Relationship Between SAT I Participation Rates and SAT I Mathematics Performance Across States, 2000-01

Source: College Board (2003).

Within states, performance trends on the SAT I and ACT can be used as an indicator of change in how well high schools are preparing their graduates for college-level coursework. To properly interpret score changes over time, it is important to examine educational and demographic changes in the population of test takers and how these changes covary with changes in performance. Between-state comparisons of performance on the SAT I and ACT must be limited to states that have similar participation rates and are similar demographically.

Use of College Entrance Examination Scores in Texas

College Admission

Each institution of higher education in Texas establishes its own criteria for admissions. Most take into consideration some combination of college admission test scores and school achievement records. The score standards required for the SAT I and ACT vary, based on the selectivity of the institution. Some institutions allow high school records, that is, grade point averages and/or class ranks, and scores on college admissions tests to compensate for each other. That is, the higher the class rank or grade point average, the lower the test score required, and vice versa. Some institutions maintain an open admissions policy, under which any person with a high school diploma or its equivalent may be accepted. Still other institutions guarantee admission to students who graduate from high schools within the state in the top percentages of their class. In Texas, since the fall semester of 1998, public higher education institutions have been required by law to admit applicants who graduate with grade point averages in the top 10 percent of their classes.

Exemption from TASP Testing in Texas

In 1987, the Texas Legislature established a system of testing and remediation called the Texas Academic Skills Program, or TASP (Texas Education Code [TEC] §51.306, 1988). Under the program, each student who enrolls in a public institution of higher education must take a diagnostic test of basic reading, writing, and mathematics skills. The TASP cannot be used as a condition of admission to the institution, but must be taken before the student completes nine semester hours of coursework. Colleges and universities are then responsible for providing remediation to students who fail any part of the test.

In 1993, the legislature created special exemptions from the TASP based on SAT I, ACT, and exit-level Texas Assessment of Academic Skills (TAAS) scores (TEC §51.306, 1994). To qualify for an exemption based on the ACT, a student must receive an ACT Composite score of at least 23 and English and Mathematics scores of at least 19 each. On the SAT I examination, a student must receive an SAT I Total score of at least 1070 and Verbal and Mathematics scores of at least 500 each.

Gold Performance Acknowledgment in the Texas Academic Excellence Indicator System

In 1993, the Texas legislature enacted the statutes mandating the creation of the Texas public school accountability system to evaluate school districts and campuses. Base indicators in the Academic Excellence Indicator System (AEIS), such as performance on TAAS and dropout rate, are used to determine accountability ratings. In addition, districts and campuses receive recognition for high performance on additional indicators that do not affect accountability ratings, for example, advanced course completion and performance on the SAT I or ACT. In 2001, the Texas legislature enacted the Gold Performance Acknowledgment (GPA) system to acknowledge districts and campuses on additional indicators (TEA, 2002). The GPA system replaced the Additional Acknowledgments process that had been part of the accountability system since 1994.

The SAT I/ACT Gold Performance Acknowledgment indicator includes two components: the percentage of non-special education graduates tested and the percentage of examinees scoring at or above a criterion score. For a district or campus to meet the GPA standard, at least 70 percent of non-special education graduates must have taken the SAT I or ACT and at least 40 percent of the examinees must have scored at least 1110 on the SAT I Total score or 24 on the ACT Composite. Standards must be met for each student group (African American, Hispanic, and White) at a district or campus, as well as for all students combined. Further information on current college admissions indicator definitions and acknowledgment standards can be found in TEA's current accountability manual (TEA, 2002).

SAT I and ACT criterion scores for recognizing high campus and district performance were established by the Texas State Board of Education (SBOE) in 1996. The scores are used only for public school accountability purposes through the Gold Performance Acknowledgment system. The SBOE criterion scores are not used by colleges to evaluate students for admission. The criteria for admission into a college or university can be obtained from the specific institution.

Data Sources and Reporting Information

Public and Non-Public Schools

Test Data

Data Sources

Public and Non-Public Schools

Texas SAT I and ACT examination results are presented in separate sections of this report. One section is based on the examination results of Texas public high school students only. In the 2000-01 school year, 98,336 Texas public high school students took the SAT I, and 60,536 Texas public high school students took the ACT. The other section, in which the results for Texas are presented along with those for other states and the nation as a whole, is based on the combined results of public and non-public high school students. In the 2000-01 school year, 111,277 Texas public and non-public high school students took the SAT I, and 68,967 Texas public and non-public high school students took the ACT.

Test Data

TEA receives scores from the testing companies based on a self-reported graduation year. Although students other than graduating seniors, primarily high school juniors, may take the SAT I and ACT examinations, the results in this report are based on the scores of only those students who indicated they were graduating seniors in the reporting year. In addition, although students may take the SAT I and ACT examinations more than once, TEA receives and reports only the results of the examinees' most recent examinations. In a case in which the number of students tested is larger than the number of graduates reported by a district or campus, the percentage of graduates tested appears as 100.

Performance on each examination is reported as a scale score. In 1996, the SAT I Verbal and Mathematics scores were recentered to realign the distributions of the Verbal and Mathematics scales. Recentering set the mean of each section to approximately 500. As a result of recentering, SAT I scores reported since 1996 cannot be compared to scores reported before 1996 without a score conversion. The ACT score scale was changed in 1990; therefore, ACT scores reported since 1990 cannot be compared to scores reported before 1990 without a score conversion.

Table 1 provides a summary of the various ways in which data are aggregated in the following sections of this report.

Data Sources

SAT I test data for Texas public high school examinees were provided to the Texas Education Agency (TEA) by the College Board. ACT test data for Texas public high school examinees were provided to TEA by ACT, Inc. Previous years' SAT I and ACT results for Texas public high schools were obtained from previous TEA annual reports (TEA 1997, 1998, 1999, 2000, 2001). Results for all public and non-public examinees in Texas and the nation were obtained from summary reports released annually by the College Board (College Board, 1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b) and by ACT, Inc. (ACT, Inc., 1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b).

Table 1
Levels of Data Reporting

Student group	All students By ethnicity By gender
Geographic area	Texas United States Other states

In the source notes for tables and figures in this report, publications are listed first, cited by author and publication date; proprietary data sets are listed second, cited by authorizing agency.

Gender and ethnicity information was obtained from data that examinees provided to the College Board and ACT, Inc. Information on the number of Texas public school graduates was obtained from the Public Education Information Management System (PEIMS). In test score data from the testing companies, ethnicity is self-reported by the examinees. In PEIMS data, ethnicity is reported to TEA by the school districts. In a small percentage of records, ethnicity information is not consistent between the two sources of data; in such cases, results were calculated using information from PEIMS. Trends in the rates and scores for Native Americans may be unstable due to two additional limitations of the data. First, the number of Native American students in Texas is very small (519 public school graduates in 2001), and the number of examinees is even smaller (399 in 2001). Second, College Board, ACT, Inc., and TEA use slightly different data collection methods for reporting students as members of Native American ethnic groups. As a consequence, single-year results and trends reported for this student group should be interpreted with caution.

Results for Texas Public Schools

Academic Excellence Indicator System Measures

SAT I

ACT

Academic Excellence Indicator System Measures

Participation Rates

As noted previously, in 1993, the Texas Legislature mandated the creation of the Texas public school accountability system to evaluate districts and campuses. “Base” indicators in the Academic Excellence Indicator System (AEIS) are used to determine accountability ratings. College admissions test results are “additional” indicators in the AEIS, which are used to acknowledge districts and campuses for high performance on measures that do not affect accountability ratings. The AEIS measures regarding college admissions testing are (1) the percentage of graduating seniors tested on either the SAT I or ACT and (2) the percentage of examinees meeting the criterion established by the State Board of Education on either the SAT I (a score of at least 1110 on the SAT I Total) or the ACT (a score of at least 24 on the ACT Composite). If an examinee takes both tests and meets the criterion on both of them, performance on the AEIS achievement indicators is counted only once.

In 2000-01, a total of 122,417 public high school graduates took either the SAT I or ACT; this was up from 120,077 examinees in 1999-00 (see Table 2). The overall participation rate was 62.9 percent. In terms of participation by ethnic group, Asian/Pacific Islanders had the highest participation rate at 85.2 percent, followed by Native Americans (76.9%) and Whites (70.0%). Hispanics had the lowest participation rate, with 46.5 percent of graduates participating in SAT I or ACT testing, while African American graduates participated at a rate of 58.6 percent. A larger percentage of female graduates (65.1%) than male graduates (60.5 %) were tested.

Table 2
SAT I and/or ACT Participation Rates, Graduating Seniors, by Ethnicity and Gender, Texas Public Schools, 2000-01

Group	Graduates	Examinees	
		Number	Participation rate (%)
African American	24,388	14,298	58.6
Asian/Pacific Islander	7,058	6,012	85.2
Hispanic	62,708	29,133	46.5
Native American	519	399	76.9
White	99,821	69,924	70.0
Female	102,997	67,066	65.1
Male	91,497	55,323	60.5
State	194,494	122,417	62.9

Source. ACT, Inc.; College Board; and Texas Education Agency.

Participation rates in 2000-01 were slightly lower than participation rates in mid-decade for all students and for most student groups, although the decline does not necessarily reflect a trend.

Participation rates of high school graduates have fluctuated over the eleven-year time period from 1990-91 through 2000-01 (see Figure 2). Because SAT I Verbal and Mathematics scores were recentered in 1996, the following discussion focuses on the trend since 1995-96. In 1995-96, 64.7 percent of all students participated in testing, and in 2000-01 the rate had decreased to 62.9 percent. The SAT I participation rate of Asian/Pacific Islander graduates was 86.9 percent in 1995-96 and 85.2 percent in 2000-01. The participation rate of White graduates decreased slightly from 71.1 percent in 1995-96 to 70.0 percent in 2000-01. The participation rate of African American graduates was 60.1 percent in 1995-96 and 58.6 percent in 2000-01. A noticeable drop in the African American participation rate occurred in 1998 when only 55.9 percent of graduates participated in testing. Finally, 48.8 percent of Hispanic graduates participated in testing in 1995-96, decreasing to 46.5 percent in 2000-01. During that six-year period, the participation rates also decreased somewhat for females (66.9% in 1995-96 and 65.1% in 2000-01) and for males (62.4% in 1995-96 and 60.5% in 2000-01).

Source. Texas Education Agency (1997, 1998, 1999, 2000, 2001); ACT, Inc.; College Board; and Texas Education Agency.
 Note. Results are not available for Asian/Pacific Islanders and Native Americans from 1990-91 through 1992-93.

Percentage Meeting Criterion on Either the SAT I or ACT

In 2000-01, less than one-third (26.9%) of the graduating public school seniors who took a college entrance examination achieved the score criterion established by the Texas State Board of Education on either the SAT I or ACT (see Table 3). There were large ethnic group differences in the percentages of examinees who met the score criteria. As a group, a larger proportion of Asian/Pacific Islander examinees (42.8%) achieved the criterion score than did any other ethnic group. The next largest percentages were found among White examinees (36.2%) and Native American examinees (28.3%). The smallest percentages of examinees achieving the criterion score were found among Hispanic examinees (10.7%) and African American examinees (7.4%). A larger proportion of male than female examinees (29.9% and 24.4%, respectively) met the criterion.

Table 3
SAT I and/or ACT Performance, Graduating Seniors, by Ethnicity and Gender, Texas Public Schools, 2000-01

Group	Examinees	Examinees scoring at or above criterion	
		Number	Percent
African American	14,298	1,058	7.4
Asian/Pacific Islander	6,012	2,571	42.8
Hispanic	29,133	3,118	10.7
Native American	399	113	28.3
White	69,924	25,326	36.2
Female	67,066	16,359	24.4
Male	55,323	16,531	29.9
State	122,417	32,894	26.9

Source. ACT, Inc.; College Board; and Texas Education Agency.

Note. The criterion score for SAT I and ACT performance was established by the State Board of Education in 1996.

An examination of the performance trend since mid-decade, when the SAT I scores were recentered, reveals there has been a slight increase in the percentage of examinees in all groups who met the criterion (see Figure 3). The disparities among ethnic groups in the percentages of examinees who met the criterion were consistent from 1995-96 through 2000-01. Males outperformed females in all six years; the proportion of male examinees meeting the criterion ranged from 29.0 to 30.4 percent, while the proportion of female examinees meeting the criterion ranged from 24.1 to 24.9 percent.

 Note. The criterion score for SAT I and ACT performance was established by the State Board of Education in 1996. Results are not available for Asian/Pacific Islanders and Native Americans from 1990-91 through 1992-93.

SAT I

SAT I Participation

The SAT I is most commonly taken by high school students in their junior and senior years. Because the test is not mandatory, only a self-selected portion of the population of high school seniors takes the test each year, that is, those students who intend to pursue college studies in an institution requiring SAT I scores. In 2000-01, 50.6 percent of Texas public school graduates participated in SAT I testing (see Table 4). Over three-fourths of Asian/Pacific Islander graduates, nearly half of African American and White graduates, and about one-third of Hispanic graduates participated in SAT I testing. Just over half of female graduates and just under half of male graduates participated in testing.

Table 4
SAT I Participation Rates and Performance, Graduating Seniors, by Ethnicity and Gender, Texas Public Schools, 2000-01

Group	Graduates	Examinees		Mean scores		
		Number	Rate (%)	Mathematics	Verbal	Total
African American	24,388	10,734	44.0	421	425	846
Asian/Pacific Islander	7,058	5,475	77.6	564	504	1069
Hispanic	62,708	20,521	32.7	451	446	897

Female	102,997	53,536	52.0	483	486	970
Male	91,497	44,800	49.0	515	494	1009
State	194,494	98,336	50.6	498	490	987

Source. College Board and Texas Education Agency.

^aDue to discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System database, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent.

From 1995-96 through 2000-01, the overall rate of participation in SAT I testing held steady at about 50 percent (see Table 5). The ranking of ethnic groups by participation rate did not change during this period of time, but the level of participation decreased somewhat for each group. Most noticeably, the participation rate for Asian/Pacific Islanders decreased eight percentage points between 1995-96 and 2000-01. The female participation rate was a little higher than the rate for males each year.

Table 5
SAT I Participation Rates, Graduating Seniors, by Ethnicity and Gender, Texas Public Schools, 1995-96 Through 2000-01

Graduation year	Group (%)					Gender (%)		State (%)
	African American	Asian/Pacific Islander	Hispanic	Native American ^a	White	Female	Male

^aDue to discrepancies in the reporting of ethnicity between test score data from the testing companies and the Texas Education Agency Public Education Information Management System database, participation rates for ethnic groups with small numbers of graduates may be greater than 100 percent. In such cases, the number is presented in the table as 100 percent.

Mean SAT I Scores

The average SAT I Total score in 2000-01 was 987 (see Table 4 on page 22), three points below the average score of 990, obtained in 1999-00. There appear to be significant mean differences among student groups. In 2000-01, the highest average SAT I Total scores were obtained by Asian/Pacific Islander examinees (with an average of 1069) and White examinees (with an average of 1047). Asian/Pacific Islander examinees scored considerably higher on the Mathematics section than the other ethnic groups. Males' average SAT I Total, Verbal, and Mathematics scores were higher than females' average scores. Males had an average Total score of 1009, whereas females had a Total average score of 970.

The average scores for all students declined slightly from 1995-96 through 2000-01 (see Table 6). Verbal scores held steady in the range of 490 to 493, and Mathematics scores held steady in the range of 498 to 500. Within ethnic groups, the average Verbal scores were relatively stable, although there was a slight upward trend for Asian/Pacific Islander and Native American examinees. Average Mathematics scores were stable as well within each ethnic group. Between groups, the differences in average group scores were stable over this time period. Average SAT I Total scores of Asian/Pacific Islander, White, and Native American examinees were consistently higher than those of Hispanic and African American examinees (see Figure 4). Verbal and Mathematics scores also remained stable for male and female examinees, with males consistently obtaining much higher scores on Mathematics than females (see Table 6 on page 25 and Figure 5 on page 26).

SAT I Examinee Profile

In 2000-01, except in the case of African American students, a discrepancy was found between the representation of each ethnic group in the SAT I examinee population and its representation in the graduate population (see Figure 6). The proportion of African American students was the same in both instances: 12.5 percent of examinees and 12.5 percent of graduates were African American. Among Asian/Pacific Islander, Native American, and White students, each group's proportion of SAT I examinees was greater than its proportion of high school graduates. For example, Asian/Pacific Islanders made up 6.4 percent of examinees, although only 3.6 percent of the graduate population was Asian/Pacific Islander. On the other hand, the percentage of SAT I examinees who were Hispanic was considerably smaller than the Hispanic proportion of graduates; only 23.9 percent of examinees were Hispanic, although Hispanics made up 32.2 percent of graduates.

The percentages of male and female SAT I examinees in 2000-01 were similar to their proportions of the graduate population. Females made up 54.4 percent of examinees and 53.0 percent of all graduates; males made up 45.6 percent of SAT I examinees and 47.0 percent of all graduates.

ACT

ACT Participation

Approximately 31.1 percent of all Texas public school graduates took the ACT in 2000-01 (see Table 7). Native Americans had the highest level of participation (64.7%). Participation rates of the other ethnic groups ranged from a high of 33.1 percent of White examinees to a low of 20.4 percent of Hispanic examinees. The participation rate of female graduates was 34.5 percent, and the participation rate of male graduates was 27.0 percent.

Table 7
ACT Participation Rates and Performance, Graduating Seniors, by Ethnicity and Gender, Texas Public Schools, 2000-01

Group	Examinees			Mean scores				
	Graduates	Number	Rate (%)	English	Mathematics	Reading	Science Reasoning	Composite

Source. ACT, Inc. and Texas Education Agency.

The rate of participation in ACT testing held relatively steady between 1996-97 and 2000-01 (see Table 8). The participation rate for each ethnic group also changed little across this time period. The female participation rate was somewhat higher than that for males during each year.

Table 8
ACT Participation Rates, Graduating Seniors, by Ethnicity and Gender, Texas Public Schools, 1995-96 Through 2000-01

Graduation year	Group (%)					Gender (%)		State (%)

Mean ACT Scores

The average ACT Composite score in 2000-01 was 20.2 (see Table 7 on page 28), one-tenth of a point below the average score of 20.3 in 1999-00. The highest average ACT Composite scores in 2000-01 were obtained by Asian/Pacific Islander and White examinees. Asian/Pacific Islander examinees scored considerably higher on the Mathematics section than did the other ethnic groups; their average score of 23.8 was almost three points higher than the next highest average Mathematics score of 21.4, obtained by White examinees. There were no consistent patterns of differences in the scores of males and females.

From 1995-96 through 2000-01, there was little variability in average ACT scores (see Table 9). Average scores on all sections of the ACT were in the range of 19-21. From 1995-96 through 2000-01, average ACT Composite scores were highest for Asian/Pacific Islander and White examinees (see Table 9 and Figure 7). Scores were generally stable within each ethnic group across all six years. Males had higher average scores than females on Mathematics and Science Reasoning each year, but females had higher average scores than males on English and Reading each year (see Table 9 on page 31 and Figure 8 on page 32). Scores were consistent across years for males and females on all sections.

ACT Examinee Profile

In 2000-01, the proportions of African Americans and Asian-Pacific Islanders among graduates were only slightly higher than their proportions of ACT examinees: 12.5 percent of graduates and 12.4 percent of examinees were African American and 3.6 percent of graduates and 3.4 percent of examinees were Asian-Pacific Islander. A discrepancy was found between the representation of each of the other ethnic groups in the ACT examinee population and its representation in the graduate population (see Figure 9). Among Whites and Native Americans, the percentage of examinees was greater than the percentage of graduates. For example, Whites made up 58.6 percent of ACT examinees but only 51.3 percent of graduates. On the other hand, the percentage of Hispanic students who took the ACT was less than their proportion of the graduate population; Hispanics made up only 25.0 percent of examinees, whereas they made up 32.2 percent of all graduates.

The percentages of males and females taking the ACT in 2000-01 and their proportions of the graduate population were found to be somewhat different (see Figure 9). Females made up 58.9 percent of ACT examinees and 53.0 percent of all graduates. A smaller proportion of males took the examination: 41.1 percent of examinees were male, while 47.0 percent of graduates were male.

Results for Texas and the Nation

Texas and the United States: SAT I

Texas and the United States: ACT

Texas and Other States: SAT I and ACT

Texas and the United States: SAT I

Participation

The number of SAT I examinees among graduating seniors in both public and non-public Texas schools steadily increased from 89,329 in 1995-96 to 111,277 in 2000-01, an increase of 24.6 percent (see Table 10). During the same period, the number of SAT I examinees in the nation increased 17.7 percent, from 1,084,725 to 1,276,320. The rate at which Texas graduating seniors took the SAT I increased from 48 percent to 53 percent, and the national participation rate increased from 41 percent to 45 percent.

Table 10
SAT I Participation Rates, Graduating Seniors, Texas and the Nation, 1995-96 Through 2000-01

Graduation year	Examinees		Participation rate (%)	
	Texas	Nation	Texas	Nation
1995-96	89,329	1,084,725	48	41
1996-97	94,034	1,127,021	49	42
1997-98	100,417	1,172,779	51	43
1998-99	104,144	1,220,130	50	43
1999-00	108,919	1,260,278	52	44
2000-01	111,277	1,276,320	53	45

Source. College Board (1996a, 1996b, 1997a, 1997b, 1998a, 1998b, 1999a, 1999b, 2000a, 2000b, 2001a, 2001b).

Note. Rates that involve both public and private schools were obtained from summary reports released annually by the College Board. In these reports, the rates are rounded to the nearest whole number.

Mean Scores

From 1995-96 through 2000-01, the national mean SAT I scores were generally higher than the Texas mean scores for all ethnic and gender groups, with one notable exception (see Table 11 below and Table 12 on page 38). The exception was for Asian/Pacific Islander examinees, whose mean SAT I Total and Verbal scores were higher in Texas than in the nation across all six years. Mathematics scores of Asian/Pacific Islanders were also higher in Texas than in the nation during three of those years (1995-96, 1996-97, and 1998-99). In addition, the gaps between national and Texas mean SAT I subject and total scores increased for both females and males over the six-year period. For mean scores by ethnicity prior to 1995-96, see Table A-1 in Appendix A.

Examinee Profile

Across the period 1995-96 through 2000-01, the percentage of SAT I examinees in each ethnic group in Texas public and non-public high schools was similar to the national percentage, except for Hispanic students (see Table 13). Whereas Hispanics made up about 20 percent of the test-taking population in Texas, Hispanics were only about eight percent of test takers across the nation. The proportions of female and male examinees in Texas were also similar to the national percentages (see Table 14). For SAT I participation trends by ethnic group prior to 1995-96, see Table A-3 in Appendix A.

Table 13
SAT I Participation, Graduating Seniors, by Ethnicity, Texas and the Nation, 1995-96 Through 2000-01

Texas and the United States: ACT

Participation

The number of ACT examinees in Texas public and non-public schools increased from 55,442 in 1995-96 to 68,967 in 2000-01, an increase of 24.4 percent (see Table 15). The number of ACT examinees nationally increased from 924,663 to 1,069,772, an increase of 15.7 percent. In Texas, the rate at which graduating seniors took the ACT increased from 30 percent to 33 percent during this time period. Nationally, the participation rate increased from 35 percent to 38 percent.

Mean Scores

From 1995-96 through 2000-01, the average scores for White and Hispanic students were generally higher nationally than in Texas on all ACT sections (see Table 16 on page 42). This trend was the same for scores by gender (see Table 17 on page 43). Among Asian/Pacific Islander and African American examinees, however, the majority of scores were a few tenths of a point higher in Texas than in the nation on most ACT sections during this time period. For mean scores by ethnicity prior to 1995-96, see Table A-2 in Appendix A.

Examinee Profile

Across the period 1995-96 through 2000-01, the percentages of African American ACT examinees in Texas were similar to the percentages of African American examinees nationally (see Table 18). However, in the United States as a whole, only 5.6 percent of test takers were Hispanic, whereas in Texas, 22.8 percent of test takers were Hispanic. In contrast, the percentages of White examinees in Texas were close to 16 percentage points smaller than the percentages of White examinees nationally. The proportions of male and female examinees were similar in Texas and the nation across the six-year period (see Table 19). For ACT participation trends by ethnic group prior to 1995-96, see Table A-3 in Appendix A.

Texas and Other States: SAT I and ACT

Participation rates for both SAT I and ACT varied considerably across states (see Table 20 on page 46 and Table 21 on page 48). On the SAT I, Mississippi (4%), North Dakota (4%), and South Dakota (4%) had the lowest participation rates, while Connecticut (82%), New Jersey (81%), and Massachusetts (79%) had the highest participation rates. On the ACT, Connecticut (4%), Delaware (4%), and New Jersey (4%) had the lowest participation rates, while Mississippi (89%), Louisiana (80%), and North Dakota (80%) had the highest participation rates. Participation in SAT I testing was highest in states of the Northeast, whereas participation in ACT testing was highest in states of the South and Midwest. In western states, about half of the high school graduates took each test.

It is important to keep in mind that it is not appropriate to compare mean scores among states with very different rates of participating in college admissions testing. Given two groups with very different participation rates but equal ability levels, the mean score of the group with a very low participation rate will tend to be higher than the mean score of the group with a very high participation rate even though there is no actual difference in ability levels. Comparisons should be limited to states with similar participation rates. For example, states with SAT I participation rates similar to the rate in Texas (53%) include Alaska, California, Hawaii, Washington, Florida, and Oregon. States with ACT participation rates similar to Texas' (33%) include the District of Columbia, Arizona, South Carolina, Alaska, Nevada, and Florida. Even in states with similar participation rates, demographic differences can influence aggregate scores and the validity of comparisons.

Notes on Appendix B

Results and Notes Listed in Tables

Table B-1 includes, for each district and campus, the average SAT I Verbal, Mathematics, and Total scores of SAT I examinees in 2000-01, the number of graduates who took the SAT I, the total number of graduates and the percentage of graduates who tested, the number and percentage of examinees with SAT I Total scores of 1110 or higher, and a “Note” column for district- and campus-specific comments. Table B-2 contains the same information for the ACT English, Mathematics, Reading, Science Reasoning, and Composite scores. Table B-3 contains information for the AEIS indicators based on results for either the SAT I or ACT. Included in Table B-3 are the number and percentage of SAT I- and/or ACT-tested graduates for each district and campus, the number and percentage of examinees scoring at or above the criterion on either test, a “Note” column for district- and campus-specific comments, and a column labeled “Test” which indicates whether a district or campus had both SAT I- and ACT- tested graduates or only SAT I or ACT examinees. For districts with only one high school, campus results are the same as district results.

For districts and campuses in which the number of graduates tested was less than five, SAT I and ACT results are not listed because statistics based on such low numbers become unstable. A “<5 tested” note is printed for districts with fewer than five students tested. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. In addition, districts and campuses with fewer than five students scoring at or above the criterion are given a “<5 high” comment; when it is possible for these score data to be arithmetically inferred from other district- or campus-level data. Additional masking is employed using intervals of 10 students scoring at or above criterion (e.g., “<10 masked,” “<20 masked,” “<30 masked,” etc.).

Data Sources

Data for public school graduates in 2001 who participated in the SAT I: Reasoning Test were obtained from the College Board, and data for public school graduates who participated in the ACT were obtained from ACT, Inc. Although the effect is believed to be small, some amount of inaccuracy may have resulted from using high school codes supplied by the testing programs to link students' scores to schools and districts (personal communication with B. Cumberland, Educational Testing Service, November 11, 1997). In another small set of cases, student miscoding of one of the fields used for student matching may have resulted in more than one set of scores per student (personal communication with M. Farmer, ACT, Inc., July 16, 1998). Such discrepancies may have caused slight imprecision in estimating percentages of graduates tested. The computation of percentages of graduates tested used the total number of non-special education graduating seniors as the denominator. Graduate data came from TEA data files for each district and campus. In Tables B-1 through B-3, in the event that the number of students tested was larger than the number of graduates reported for a district or campus, the percentage of graduates tested was presented as 100.

Notes on Appendix C

Results and Notes Listed in Table

Table C-1 presents SAT I and ACT participation and performance results disaggregated by category within 25 groupings of district characteristics, as defined by the Texas Education Agency's (TEA's) ANALYZE program. Table C-1 shows the percentage of graduates tested on the SAT I and/or the ACT, the mean SAT I Total score, the mean ACT Composite score, and the percentage of examinees scoring at or above criterion in 2000-01 in each of the 25 groupings of district characteristics. In addition, state summary statistics are provided at the bottom of each page of statistics.

Data Sources

Data for public school graduates in 2001 who participated in the SAT I: Reasoning Test were obtained from the College Board, and data for public school graduates who participated in the ACT were obtained from ACT, Inc. Although the effect is believed to be small, some amount of inaccuracy may have resulted from using high school codes supplied by the testing programs to link students' scores to schools and districts (personal communication with B. Cumberland, Educational Testing Service, November 11, 1997). In another small set of cases, student miscoding of one of the fields used for student matching may have resulted in more than one set of scores per student (personal communication with M. Farmer, ACT, Inc., July 16, 1998). Such discrepancies may have caused slight imprecision in estimating percentages of graduates tested.

The computation of percentages of graduates tested used the total number of non-special education graduating seniors as the denominator. Graduate data came from TEA data files for each district and campus.

The information on the 25 district characteristics was obtained from the ANALYZE program, which was created based on data from TEA's Public Education Information Management System (PEIMS). All data about teachers, district budgets, and students is from the fall submission of the PEIMS. All data is for the 2000-01 school year with the exception of college admissions, which lag one year behind. Grouping criteria include student enrollment, district type, the percentage of students passing TAAS, and the percentage of teachers with an advanced degree. Although the number of categories within each grouping is consistent from year to year, the range represented by a particular category may change.

Texas Education Agency

District Analyze Category Descriptions, 2000-01

Enrollment

Districts are grouped by size into nine subcategories based on their number of students in membership. This is the total number of students in membership in the district on a day in late October of each year. It does not include students who are served by the district but are not in membership in the serving district.

District Type

Districts are classified on a scale ranging from major urban to rural. The charter school districts are in a separate subcategory. Factors such as size, growth rates, student economic status, and proximity to urban areas are used to determine the appropriate group. The groups are:

Major Urban

The largest school districts in the state that serve the six metropolitan areas of Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso. A district is designated major urban if it is the largest in counties with populations of 650,000 or over, and there are greater than 35% low-income students in the school district. Or, if not the largest district in the county, the number of students in membership is 75% of the largest district and there are more than 35% low-income students in the district.

Major Suburban

Other school districts in and around the major urban areas. A district is major suburban if it is contiguous to a major urban district and the number of students in membership is at least 3% of the major urban district or an enrollment of at least 4,500. If a district is not contiguous to a major urban area, then it must be within the same county and have an enrollment of 15% of the major urban district or an enrollment of at least 4,500 in order to be classified as major suburban.

Other Central City

The major school districts in other large Texas cities. If the district is not contiguous to one of the major urban districts but the county population is between 100,000 and 650,000 and it is the largest district in the county or its population is 75% of the largest district then the district is designated as other central city.

Other Central City Suburban

Other school districts in and around the other large, but not major, Texas cities. If the district is in a county between 100,000 and 650,000 population and the number of students in membership is at

least 15% of the largest district in the county then it is designated central city suburban. If a district is contiguous to a central city district, its population is greater than 3% of that district's, and the number of students in membership is greater than the corresponding median figure for the state, it is also central city suburban.

Independent Town

If the district is the largest in a county having a population of 25,000 to 100,000, or the number of students in membership is greater than 75% of the largest district, the district is considered an independent town.

Non-Metro: Fast Growing

The school districts that fail to be in any of the above subcategories and that exhibit a five-year growth rate of at least 20 percent. These districts must have at least 300 students in membership.

Non-Metro: Stable

The school districts that fail to be in any of the above subcategories, yet the number of students in membership exceed the state median of 726.

Rural

The school districts that fail all of the above tests for placement into a subcategory. These districts either have a growth rate less than 20 percent and the number of students in membership is between 300 and the state median of 726, or the number of students in membership is less than 300.

Charter Schools

The 159 open-enrollment schools granted a charter by the State Board of Education for operation during 2000-01. Open-enrollment charter schools operate in a facility of a commercial or nonprofit entity or a school district.

Property Wealth

Wealth is defined as total taxable property value divided by the total number of students and is used as an indicator of a district's ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year, i.e. 2000, as determined by the Comptroller's Property Tax Division (CPTD). This taxable value includes a reduction for 50% of a locally adopted optimal homestead exemption, and will affect state aid in the 2000-01 school year. The total number of students is for the current school year, i.e. 2000-01. The first wealth grouping classifies districts into ten subcategories with approximately equal numbers of districts in each, called deciles. The second grouping simply shows districts above and below state average wealth. The third wealth grouping classifies districts into 20 subcategories with approximately equal numbers of

students in each. The six special statutory and 159 charter school districts form a separate group in all three categories because they have no taxable property wealth.

Locally Adopted Tax Rates

Districts are grouped into four tax effort subcategories, or quartiles, with approximately equal numbers of districts in each. This category shows the total adopted tax rate, as reported by the CPTD office. The six special statutory and 159 charter school districts are in a separate subcategory because they do not levy property taxes.

Local Maintenance and Operations Tax Rates

Districts are grouped into four tax effort subcategories, or quartiles, with approximately equal numbers of districts in each. This category shows the maintenance and operation (M&O) adopted tax rate, as reported by the CPTD office. The M&O levy includes money generated by districts for equalizing wealth. The six special statutory and 159 charter school districts form a separate group in both categories because they do not levy property taxes.

Highest Property Value Category

Currently, the Comptroller's Property Tax Division (CPTD) classifies property into multiple subcategories based on how the property is used. These subcategories are aggregated into four classifications as follows:

- Residential: single-family and multi-family residential, and residential inventory;
- Land: vacant lots, and rural real (taxable);
- Oil and Gas: oil, gas, and minerals; and
- Business: commercial and industrial real, commercial and industrial personal, and utilities

The one subcategory of these four which has the greatest total property value for a district determines in which category the district is placed. The six special statutory and 159 charter school districts form a separate group because they have no taxable property wealth.

Small/Sparse Adjustment

Districts are grouped into four small/sparse subcategories, or quartiles, with approximately equal numbers of districts in each. The category shows the amount of small/sparse adjustment as a percent of the total adjusted basic allotment amount. A fifth subcategory contains all districts receiving no small/sparse adjustment. This small/sparse percentage is a measure of the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts.

Cost of Education Index

The Cost of Education Index (CEI) reflects geographic variations in costs beyond the control of school districts. The index currently in use was first implemented in 1991-92. The CEI has a minimum value of 1.0 and a maximum of 1.20. This category divides districts into five groups with approximately equal numbers of districts in each.

Operating Cost per Student

Operating costs are the sum of all expenditures budgeted for the operation of the district, for all funds which are reported. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the current school year expenditures divided by the current number of students. Districts are grouped into five subcategories with approximately equal numbers of districts in each. The source for budgeted expenditures is the fall submission of the Public Education Information Management System (PEIMS).

Education Service Center Regions

The state is divided into 20 geographic regions, each served by an Education Service Center (ESC). The ESC region reflected in this category is the region from which the district receives services, not the geographically assigned ESC region. For the vast majority of districts, these are the same.

TAAS: Percent Passing all Tests Taken

For grades 3-8 and 10, the total number of students who passed all sections taken is expressed as a percentage of the total number of students taking one or more tests. Districts are grouped into five subcategories with the percent passing ranging from “under 73.7%” to “90.4% and over.” These percentages exclude performance on Science and Social Studies in grade 8. Furthermore, these percentages include only those students enrolled in the district in October of the school year. These are the results used for accountability purposes. A sixth subcategory refers to districts not administering the test.

SAT I/ACT: Percent Taking

Districts are grouped into three subcategories based on the number of prior year graduates who were administered either the SAT I or ACT, or both. The number of test takers taking one or both tests is divided by the number of non-special education graduates. A fourth subcategory is for those districts that have no graduates.

SAT I/ACT: Percent Scoring at or Above Criterion

Districts are grouped into five subcategories based on the number of examinees who scored at or above the criterion score for either the ACT or SAT I in the previous year. The number of examinees meeting the criterion is divided by the number of examinees. A sixth subcategory is for those districts that have no test takers. The criterion score is 1110 for the SAT I Total and 24 for the ACT Composite.

Student Density

Many years ago, the square miles in a school district were determined through a joint effort by the State Property Tax Board, now the CPTD, the Texas Education Agency, and the Texas Water Commission. School district maps provided by school districts to the CPTD were digitized by the Water Commission and acreage was determined. Density is the number of students per square mile. Density groups range from “fewer than five students per square mile” to “100 or more students per square mile.” The six special statutory and 159 charter school districts form a separate group because mileage information is not available for them.

Pupil Change: 1999/00 – 2000/01

This category looks at the growth or decline in student population over a one-year period. Districts where the total number of students declined represent one grouping, while the remaining groups show one year growth rate ranging from “0%-3%” to “10% and over.”

Percent African American, Hispanic, and Minority Students

In these categories, districts are grouped according to the ethnic composition of their student populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-white populations expressed as a percent of the total. The non-white populations include Native American or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic. Each of the three categories has six subgroups with the particular population ranging from “under 5%” to “50 percent and over.”

Percent Economically Disadvantaged (Low Income) Students

Percent low income is the number of students reported as economically disadvantaged on PEIMS, expressed as a percent of the total number of students. Districts report students as economically disadvantaged if they meet any of the following conditions:

- a. eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- b. from a family with an annual income at or below the federal poverty line;
- c. eligible for AFDC or other public assistance;

- d. recipients of a Pell Grant or comparable state program of need-based financial assistance; or
- e. eligible for programs assisted under Title II of the Job Training Partnership Act.

Districts are grouped into six subgroups ranging from “under 20%” to “80% and over.”

Average Teacher Experience

In this category, districts are grouped into four subcategories with approximately equal numbers of districts in each. Weighted averages are obtained by multiplying each teacher's FTE count by years of experience. These amounts, when summed for all teachers within a district and divided by the total teacher FTE count within that respective district, result in the average years of teacher experience.

Average Teacher Salary

In this category, districts are grouped into four subcategories with approximately equal numbers of districts in each. Average teacher salary is calculated as the total salary of teachers divided by the total FTE count of teachers. The total salary amount is for regular duties only and does not include pay for any supplemental duties.

Percent Minority Teachers

In this category, districts are grouped according to the minority composition of their teacher populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-white teacher FTEs expressed as a percent of total teacher FTEs. The category has six groupings with the minority population ranging from “under 5%” to “50% and over.”

Percent of Teachers With Advanced Degrees

In this category, districts are grouped into four subcategories with approximately equal numbers of districts in each. The percent of teachers with an advanced degree is calculated as the FTE count of teachers with a master's degree or doctorate divided by the FTE count for all teachers.

Compliance Statement

Title VI, Civil Rights Act of 1964, the Modified Court Order, Civil Action 5281, Federal District Court, Eastern District of Texas, Tyler Division.

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

1. acceptance policies on student transfers from other school districts;
2. operation of school bus routes or runs on a nonsegregated basis;
3. nondiscrimination in extracurricular activities and the use of school facilities;
4. nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
5. enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
6. nondiscriminatory practices relating to the use of a student's first language; and
7. evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

Title VII, Civil Rights Act of 1964 as Amended by the Equal Employment Opportunity Act of 1972; Executive Orders 11246 and 11375; Equal Pay Act of 1964; Title IX, Education Amendments; Rehabilitation Act of 1973 as Amended; 1974 Amendments to the Wage-Hour Law Expanding the Age Discrimination in Employment Act of 1967; Vietnam Era Veterans Readjustment Assistance Act of 1972 as Amended; Immigration Reform and Control Act of 1986; Americans With Disabilities Act of 1990; and the Civil Rights Act of 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
